Queue test: Chapter 1

Page 1: Let f(x) = x^2 + 1x + 1.

The derivative is f'(x) = 2x + 1.

Explain this derivative step by step.

Reading should continue while the AI is thinking.

The result should stay linked to this page.

ORIGIN_TOKEN_PAGE_1

Quadratic formula:

x = (-b +/- sqrt(b^2 - 4ac)) / (2a)

Select any sentence to queue a question.

Queue test: Chapter 2

Page 2: Let f(x) = x^2 + 2x + 1.

The derivative is f'(x) = 2x + 2.

Explain this derivative step by step.

Reading should continue while the AI is thinking.

The result should stay linked to this page.

ORIGIN_TOKEN_PAGE_2

Quadratic formula:

x = (-b +/- sqrt(b^2 - 4ac)) / (2a)

Select any sentence to queue a question.

Queue test: Chapter 3

Page 3: Let f(x) = x^2 + 3x + 1.

The derivative is f'(x) = 2x + 3.

Explain this derivative step by step.

Reading should continue while the AI is thinking.

The result should stay linked to this page.

ORIGIN_TOKEN_PAGE_3

Quadratic formula:

x = (-b +/- sqrt(b^2 - 4ac)) / (2a)

Select any sentence to queue a question.

Queue test: Chapter 4

Page 4: Let f(x) = x^2 + 4x + 1.

The derivative is f'(x) = 2x + 4.

Explain this derivative step by step.

Reading should continue while the AI is thinking.

The result should stay linked to this page.

ORIGIN_TOKEN_PAGE_4

Quadratic formula:

x = (-b +/- sqrt(b^2 - 4ac)) / (2a)

Select any sentence to queue a question.

Queue test: Chapter 5

Page 5: Let f(x) = x^2 + 5x + 1.

The derivative is f'(x) = 2x + 5.

Explain this derivative step by step.

Reading should continue while the AI is thinking.

The result should stay linked to this page.

ORIGIN_TOKEN_PAGE_5

Quadratic formula:

x = (-b +/- sqrt(b^2 - 4ac)) / (2a)

Select any sentence to queue a question.

Queue test: Chapter 6

Page 6: Let f(x) = x^2 + 6x + 1.

The derivative is f'(x) = 2x + 6.

Explain this derivative step by step.

Reading should continue while the AI is thinking.

The result should stay linked to this page.

ORIGIN_TOKEN_PAGE_6

Quadratic formula:

x = (-b +/- sqrt(b^2 - 4ac)) / (2a)

Select any sentence to queue a question.
